The following is an examiner's statement of reasons for allowance: The prior art does not disclose a rectilinear ion trap mass analyzer comprising x and y pairs of electrodes, to which RF voltages are applied to form RF trapping fields in the xy plane, end electrodes, to which DC voltages are applied, at the ends of the trapping volume, and an AC voltage source for applying AC voltages to at least one pair of the x or y electrodes to excite ions in the corresponding zx or zy plane.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. As is discussed in the specification, Reinhold et al. (U.S. Patent No. 6,483,109) discloses a linear array of ion traps comprising harmonic linear traps (HLTs). The cells of the HLTS are composed of parallelepiped rectangular electrodes oriented in the ZX and ZY planes with no rectangular electrode in the XY plane. Ion cyclotron resonance (ICR) ion trap mass analyzers such as that disclosed by McIver, Jr. (U.S. Patent No. 3,742,212), on the other hand, do have end plates at the ends of a trapping volume formed by parallelepiped rectangular electrodes oriented in the ZX and ZY planes, but the trapping fields are formed by the interaction of RF voltages applied to only one pair of electrodes which are arranged orthogonally to a uniform magnetic field. Nothing in the prior art suggests any reason for applying RF voltages to both the x and y pairs of electrodes in an ICR ion trap.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
